Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6, 8-10, 13-20, and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by US Pat. Appl. 2003/0197002.

Referring to Paragraphs 8-12, 31, 42, and 58, US'002 discloses a toaster that automatically switches between 750W and 1500W power levels during a toasting operation, and a plurality of such cycles (par. 9), exactly as claimed. The "normal and low power" settings recited in claim 6 are undefined, and can be identified with the above two values. Input controls 106 & 108 constitute an "electronic data management system," albeit a rudimentary one.

Claim Rejections - 35 USC § 103

Claims 7, 11, 12, 21, and 23-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'002.

The claims differ from US'002 only in calling for a low power of 200 to 700W, operating at the first power level for a first time period of 15-25 seconds, and at the second power level for a second time period of 5 to 15 seconds, a full toasting cycle of 60-120 seconds, and means to program the operation of the toaster (claim 25). However, these features do not patentably distinguish the claimed invention from the prior art. US'002 already discloses additional power settings (par. 42); the desirability of the recited lower setting would have been determined strictly and obviously in accord with known food item toasting requirements. So too would the operating periods of the power settings have been well within the competency of one of ordinary skill in the art, and rendering the device to be programmable has long been a conventional means to enhance cooking versatility.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph M. Pelham whose telephone number is 571-272-4786. The examiner can normally be reached on M-F 8:30 AM to 5:00 PM.
